10. Conclusion	22

## **Problem Statement:**

Developing a comprehensive database solution for a bus transportation company to manage various aspects of their operations. The system facilitate users in searching for available buses, booking seats, making payments, and providing feedback on their travel experiences. Administrators should have the capability to efficiently manage buses, routes, bookings, payments, user feedback, and other relevant entities. The goal is to create a robust and scalable database system that optimizes the management of bus operations while providing a seamless experience for both users and administrators.

## **Abstract:**

This project aims to design and implement a database system for a bus transportation company to streamline their operations and enhance customer satisfaction. The database will include tables for managing users, buses, routes, bookings, payments, feedback, promotions, maintenance, and administrative activities. Users will be able to search for available buses, book seats, make payments, and provide feedback on their travel experiences. Administrators will have access to tools for managing buses, routes, bookings, payments, and analyzing feedback data to improve services. The database system will provide a centralized platform to efficiently manage all aspects of the bus transportation company, leading to improved operational efficiency and customer service.

## **Entity Sets:**

**User:** Represents users of the system who can book bus tickets.

**Bus:** Represents different buses available for booking.

**Route:** Represents the various routes between departure and arrival locations.

**Booking:** Represents bookings made by users for bus journeys.

**Seat:** Represents individual seats on buses.

**Feedback:** Represents feedback provided by users after their journey.

**Admin:** Represents administrators who manage the system.

**Payment:** Represents payments made for bus bookings.

**Promotion:** Represents promotional offers for users.

**BusSchedule:** Represents schedules for buses on specific routes.

**Driver:** Represents drivers assigned to buses.

**BusMaintenance:** Represents maintenance records of buses.

**AdminActivity:** Represents activities performed by administrators.

## **Relationship Sets:**

**User-Booking:** Represents the relationship between users and their bookings.

**Bus-Booking:** Represents the relationship between buses and bookings.

**Route-Booking:** Represents the relationship between routes and bookings.

**Seat-Booking:** Represents the relationship between seats and bookings.

**Feedback-User:** Represents the relationship between feedback and users.

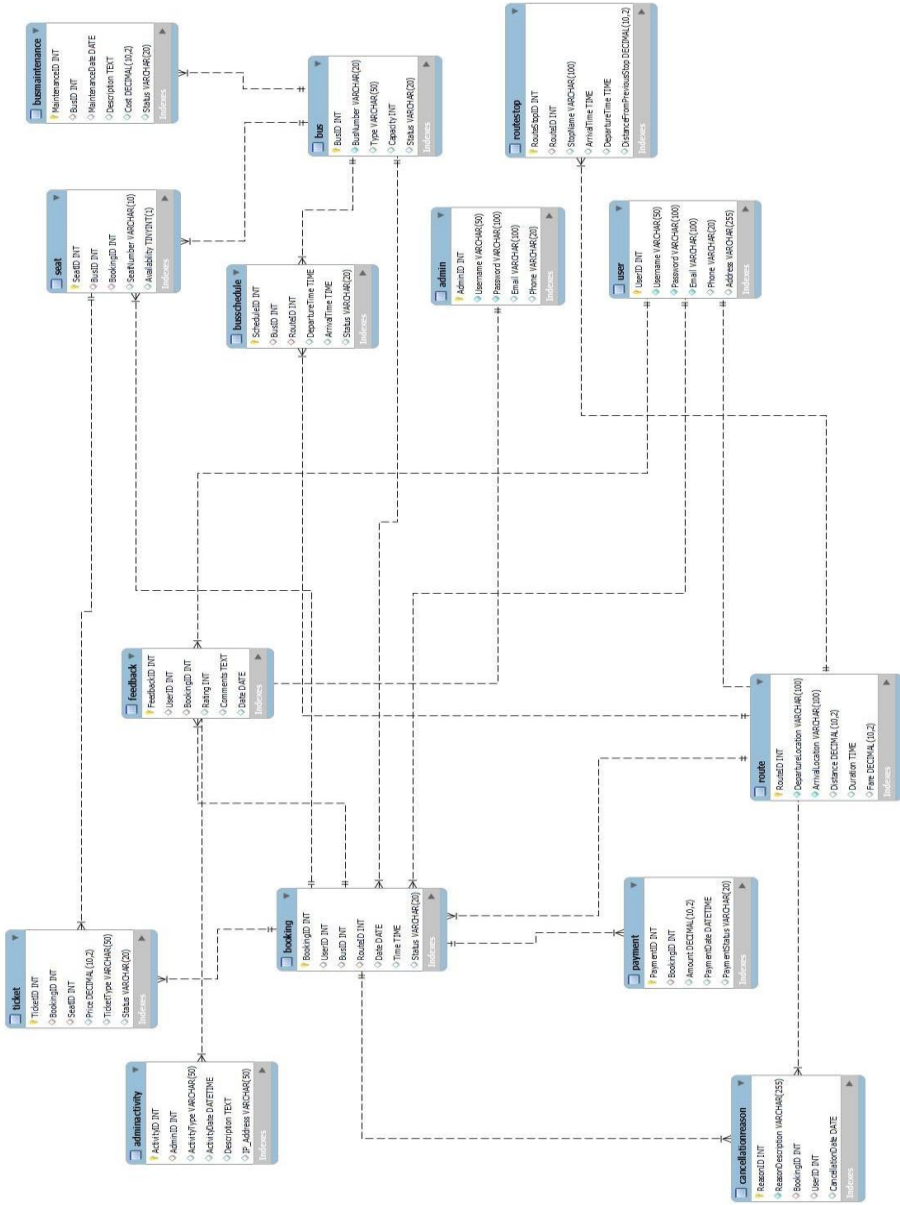

**Feedback-Booking:** Represents the relationship between feedback and bookings.

**Admin-AdminActivity:** Represents the relationship between administrators and their activities.

**Booking-Payment:** Represents the relationship between bookings and payments.

**Bus-BusMaintenance:** Represents the relationship between buses and maintenance records.

## Entity Relationship Diagram

## Creating database and Tables

```
CREATE DATABASE abhi_bus;
```

```
USE abhi_bus;
```

### **-- User Table**

```
CREATE TABLE User (  
    UserID INT AUTO_INCREMENT PRIMARY KEY,  
    Username VARCHAR(50) NOT NULL,  
    Password VARCHAR(100) NOT NULL,  
    Email VARCHAR(100) NOT NULL,  
    Phone VARCHAR(20),  
    Address VARCHAR(255)  
);
```

### **-- Bus Table**

```
CREATE TABLE Bus (  
    BusID INT AUTO_INCREMENT PRIMARY KEY,  
    BusNumber VARCHAR(20) NOT NULL,  
    Type VARCHAR(50),  
    Capacity INT,  
    Status VARCHAR(20)  
);
```

### **-- Route Table**

```
CREATE TABLE Route (  
    RouteID INT AUTO_INCREMENT PRIMARY KEY,  
    DepartureLocation VARCHAR(100) NOT NULL,
```

```
ArrivalLocation VARCHAR(100) NOT NULL,  
Distance DECIMAL(10,2),  
Duration TIME,  
Fare DECIMAL(10,2)  
);
```

#### **-- Booking Table**

```
CREATE TABLE Booking (  
    BookingID INT AUTO_INCREMENT PRIMARY KEY,  
    UserID INT,  
    BusID INT,  
    RouteID INT,  
    Date DATE,  
    Time TIME,  
    Status VARCHAR(20),  
    FOREIGN KEY (UserID) REFERENCES User(UserID),  
    FOREIGN KEY (BusID) REFERENCES Bus(BusID),  
    FOREIGN KEY (RouteID) REFERENCES Route(RouteID)  
);
```

#### **-- Seat Table**

```
CREATE TABLE Seat (  
    SeatID INT AUTO_INCREMENT PRIMARY KEY,  
    BusID INT,  
    BookingID INT,  
    SeatNumber VARCHAR(10),  
    Availability BOOLEAN,  
    FOREIGN KEY (BusID) REFERENCES Bus(BusID),  
    FOREIGN KEY (BookingID) REFERENCES Booking(BookingID)
```

)

**-- Feedback Table**

```
CREATE TABLE Feedback (  
    FeedbackID INT AUTO_INCREMENT PRIMARY KEY,  
    UserID INT,  
    BookingID INT,  
    Rating INT,  
    Comments TEXT,  
    Date DATE,  
    FOREIGN KEY (UserID) REFERENCES User(UserID),  
    FOREIGN KEY (BookingID) REFERENCES Booking(BookingID)  
);
```

**-- Admin Table**

```
CREATE TABLE Admin (  
    AdminID INT AUTO_INCREMENT PRIMARY KEY,  
    Username VARCHAR(50) NOT NULL,  
    Password VARCHAR(100) NOT NULL,  
    Email VARCHAR(100),  
    Phone VARCHAR(20)  
);
```

**-- Payment Table**

```
CREATE TABLE Payment (  
    PaymentID INT AUTO_INCREMENT PRIMARY KEY,  
    BookingID INT,  
    Amount DECIMAL(10,2),  
    PaymentDate DATETIME,  
    PaymentStatus VARCHAR(20),
```

```
FOREIGN KEY (BookingID) REFERENCES Booking(BookingID) );
```

**-- BusSchedule Table**

```
CREATE TABLE BusSchedule (  
    ScheduleID INT AUTO_INCREMENT PRIMARY KEY,  
    BusID INT,  
    RouteID INT,  
    DepartureTime TIME,  
    ArrivalTime TIME,  
    Status VARCHAR(20),  
    FOREIGN KEY (BusID) REFERENCES Bus(BusID),  
    FOREIGN KEY (RouteID) REFERENCES Route(RouteID)  
);
```

**-- Promotion Table**

```
CREATE TABLE Promotion (  
    PromotionID INT AUTO_INCREMENT PRIMARY KEY,  
    PromoCode VARCHAR(20) UNIQUE,  
    DiscountPercentage DECIMAL(5,2),  
    ExpiryDate DATE,  
    Status VARCHAR(20)  
);
```

**-- Ticket Table**

```
CREATE TABLE Ticket (  
    TicketID INT AUTO_INCREMENT PRIMARY KEY,  
    BookingID INT,  
    SeatID INT,  
    Price DECIMAL(10,2),  
    TicketType VARCHAR(50),
```

```
Status VARCHAR(20),  
FOREIGN KEY (BookingID) REFERENCES Booking(BookingID),  
FOREIGN KEY (SeatID) REFERENCES Seat(SeatID)  
);
```

#### **-- RouteStop Table**

```
CREATE TABLE RouteStop (  
    RouteStopID INT AUTO_INCREMENT PRIMARY KEY,  
    RouteID INT,  
    StopName VARCHAR(100),  
    ArrivalTime TIME,  
    DepartureTime TIME,  
    DistanceFromPreviousStop DECIMAL(10,2),  
    FOREIGN KEY (RouteID) REFERENCES Route(RouteID)  
);
```

#### **-- Driver Table**

```
CREATE TABLE Driver (  
    DriverID INT AUTO_INCREMENT PRIMARY KEY,  
    FullName VARCHAR(100) NOT NULL,  
    LicenseNumber VARCHAR(50) UNIQUE,  
    ContactNumber VARCHAR(20),  
    Email VARCHAR(100),  
    Address VARCHAR(255)  
);
```

#### **-- BusMaintenance Table**

```
CREATE TABLE BusMaintenance (  

```

```
MaintenanceID INT AUTO_INCREMENT PRIMARY KEY,  
BusID INT,  
MaintenanceDate DATE,  
Description TEXT,  
Cost DECIMAL(10,2),  
Status VARCHAR(20),  
FOREIGN KEY (BusID) REFERENCES Bus(BusID)  
);
```

#### **-- AdminActivity Table**

```
CREATE TABLE AdminActivity (  
    ActivityID INT AUTO_INCREMENT PRIMARY KEY,  
    AdminID INT,  
    ActivityType VARCHAR(50),  
    ActivityDate DATETIME,  
    Description TEXT,  
    IP_Address VARCHAR(50),  
    FOREIGN KEY (AdminID) REFERENCES Admin(AdminID)  
);
```

#### **-- CancellationReason Table**

```
CREATE TABLE CancellationReason (  
    ReasonID INT AUTO_INCREMENT PRIMARY KEY,  
    ReasonDescription VARCHAR(255) NOT NULL,  
    BookingID INT,  
    UserID INT,  
    CancellationDate DATE,  
    FOREIGN KEY (BookingID) REFERENCES Booking(BookingID),  
    FOREIGN KEY (UserID) REFERENCES User(UserID)
```

);

## Performing Queries Simple

### queries :

1. Retrieve all active buses
2. Find all routes with a fare less than \$25
3. Get all bookings with the status "Pending"
4. Retrieve all feedback with ratings greater than or equal to 4
5. Find all promotions that are currently active

**SELECT \* FROM Bus WHERE Status = 'Active';**

BusID	BusNumber	Type	Capacity	Status
1	BUS001	AC	50	Active
2	BUS002	Non-AC	40	Active
4	BUS004	AC	45	Active
5	BUS005	Non-AC	35	Active
7	BUS007	AC	50	Active

**SELECT \* FROM Route WHERE Fare < 25.00;**

RouteID	DepartureLocation	ArrivalLocation	Distance	Duration	Fare
7	Coimbatore	Kochi	150.00	03:00:00	20.00
NULL	NULL	NULL	NULL	NULL	NULL

**SELECT \* FROM Booking WHERE Status = 'Pending';**

BookingID	UserID	BusID	RouteID	Date	Time	Status
2	2	2	2	2024-04-12	09:00:00	Pending
6	6	6	6	2024-04-22	13:00:00	Pending
NULL	NULL	NULL	NULL	NULL	NULL	NULL

**SELECT \* FROM Feedback WHERE Rating >= 4;**

FeedbackID	UserID	BookingID	Rating	Comments	Date
1	1	1	4	Good service	2024-04-11
4	4	4	5	Excellent service	2024-04-19
5	5	5	4	Comfortable journey	2024-04-21
NULL	NULL	NULL	NULL	NULL	NULL

**SELECT \* FROM Promotion WHERE Status = 'Active';**

PromotionID	PromoCode	DiscountPercentage	ExpiryDate	Status
1	PROMO001	10.00	2024-05-01	Active
2	PROMO002	15.00	2024-06-01	Active
4	PROMO004	25.00	2024-08-01	Active
5	PROMO005	30.00	2024-09-01	Active
NULL	NULL	NULL	NULL	NULL

## **Aggregate Queries :**

### **Aggregate Function (COUNT), String Function (UPPER), and Aliasing:**

```
SELECT UPPER(Status) AS UppercaseStatus, COUNT(*) AS StatusCount  
FROM Booking  
GROUP BY UppercaseStatus;
```

	UppercaseStatus	StatusCount
▶	CONFIRMED	4
	PENDING	2
	CANCELLED	1

### **Aggregate Function (SUM), Mathematical Function (ABS), and Conditional Filtering:**

```
SELECT SUM(ABS(Amount)) AS TotalAmountPaid  
FROM Payment  
WHERE PaymentStatus = 'Paid';
```

	TotalAmountPaid
▶	135.00

### **Aggregate Function (AVG), Date Function (YEAR), and Grouping:**

```
SELECT YEAR(Booking.Date) AS Year, AVG(Ticket.Price) AS AveragePrice  
FROM Ticket  
JOIN Booking ON Ticket.BookingID = Booking.BookingID  
GROUP BY Year;
```

	Year	AveragePrice
▶	2024	27.857143

### **Aggregate Function (MAX), String Function (CONCAT), and Subquery:**

```
SELECT UserID, CONCAT(Username, ' - ', Email) AS UserDetails
```

FROM User

WHERE UserID = (SELECT UserID FROM Feedback WHERE Rating = (SELECT MAX(Rating) FROM Feedback));

	UserID	UserDetails
▶	4	Ananya - ananya@example.com

### Aggregate Function (MIN), Numeric Function (POWER), and Join :

SELECT MIN(Cost) AS MinCost, Power(MIN(Cost), 2) AS MinCostSquared

FROM BusMaintenance

JOIN Bus ON BusMaintenance.BusID = Bus.BusID

WHERE Bus.Type = 'AC';

	MinCost	MinCostSquared
▶	80.00	6400

## Joins Queries :

SELECT Booking.BookingID, Booking.Date, User.Username, User.Email

FROM Booking

INNER JOIN User ON Booking.UserID = User.UserID;

BookingID	Date	Username	Email
1	2024-04-10	Arjun	arjun@example.com

Sneha	BUS003
Vijay	BUS003
Niharika	BUS003

## Subqueries :

### Correlated Subquery with Aggregation:

Username	TotalBookings	AverageTicketPrice
Arjun	1	25.000000
Shivani	1	20.000000
Siddharth	1	30.000000
Ananya	1	35.000000
Niharika	1	30.000000
Vijay	1	40.000000
Sneha	1	15.000000

### Subquery with Multiple Conditions:

Username
Arjun
Ananya
Niharika
Sneha

### Subquery with Aggregation and JOIN:

Username	TotalBookings	AvgRating
Arjun	1	4.0000
Shivani	1	3.0000
Siddharth	1	2.0000
Ananya	1	5.0000
Niharika	1	4.0000
Vijay	1	2.0000
Sneha	1	3.0000

### Subquery with EXISTS and NOT EXISTS:

Username
Arjun
Ananya
Niharika
Sneha

## **Conclusion:**

In conclusion, the database system facilitates efficient management of bus transportation operations. It organizes data pertaining to users, buses, routes, bookings, payments, and feedback, ensuring integrity and reliability. Through SQL queries, including joins and subqueries, it enables analysis and decision-making. Overall, the system enhances service quality, operational efficiency, and customer satisfaction in the bus transportation industry.
